Easy switching between
proportioning rates

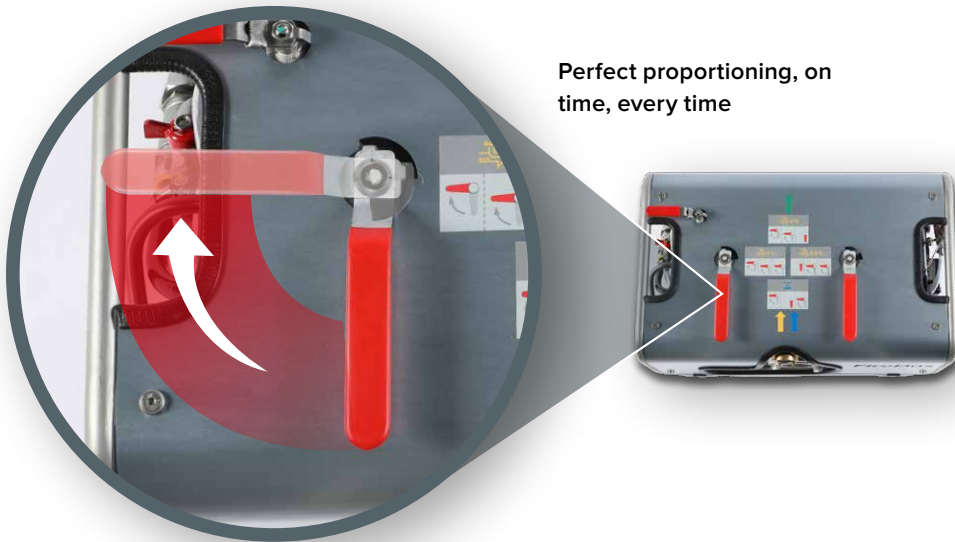

Rugged and
built-to-last

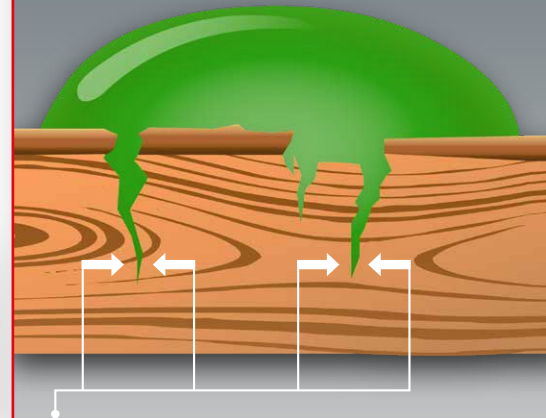

For all common foam
agent types

■ THE INNOVATIVE ALTERNATIVE TO VENTURI PROPORTIONERS.

The DZ1000 portable proportioner has been developed, especially for different firefighting scenarios. Highly versatile for mobile use, the DZ1000 guarantees precise foam concentrate proportioning across the entire operating range, from 140 l/min to 1000 l/min. It takes only a few turns to switch between the proportioning rates of 3%, 1% and 0.3% during operation.

Also suitable for producing wetting agent.

The reduced surface tension allows the wetting agent to deeply soak into the substance on fire.

■ THE COMPACT ALLROUNDER.

The mobile pressure proportioner is extremely compact and its weight of just 45kg makes carrying by two persons easy. It was designed for all foam agents commonly used by fire services.

In addition, the DZ1000 is appropriate for all jet nozzle types – independently of their height difference, e.g., when used on aerial ladders - and ideally suited for intermittent nozzle operation.
